Teeth Straightening

Teeth Straightening at The Snowdrop Clinic

Smile with confidence

At The Snowdrop Clinic our mission is to give you a smile as great as you! Teeth Straightening is a treatment that can do just that.

We use custom-made clear aligners to straighten teeth with more precision, less pain while being discreet.

Our teeth straightening aligners are virtually invisible and custom-made, which means they fit snugly over the teeth. Each aligner shifts the teeth slightly, moving and rotating them where needed (as per your treatment plan created by one of our experts).

As the aligners work their magic, you can continue life as normal. To get the results you're looking for, the aligners are to be worn for the recommended 22 hours per day - luckily, our aligners are so comfortable that you'll forget you're wearing them!

1 The Consultation

A friendly chat with one of our experts to discuss your smile goals. If you are eligible for aligner treatment, impressions, X-rays and photographs will be taken.

2 The Aligners

After being custom-made, a member of our team will contact you to pick up your first set! Unless your treatment plan states otherwise, you will change to a new set of aligners every 1-2 weeks.

3 The Results

Periodic check in appointments will be made to monitor your progress and to provide you with new aligners. Once your treatment is completed, you will be provided with retainers which are required to maintain your new smile!

Aligners vs Traditional Braces

	ALIGNERS	TRADITIONAL BRACES
Description	Aligners use a series of clear removable aligners that fit over teeth and are to be changed every 1-2 weeks	Traditional braces are stainless steel brackets and wires that are attached to the outside of the teeth. Wires are adjusted throughout to gradually move the teeth.
Aesthetics	Virtually invisible.	Visible.
Cost	As with other medical treatments, only your doctor can determine the cost of your teeth straightening treatment based on your personal requirements	

Aligners vs Traditional Braces

	ALIGNERS	TRADITIONAL BRACES
Oral Hygiene	Aligners are removed for normal brushing and flossing. Therefore, it's easier to maintain a normal oral hygiene routine.	Oral hygiene can be harder to maintain with fixed braces when brushing and flossing.
Comfort	Most patients experience temporary discomfort at the beginning of each new aligner. This is typically described as tight/a feeling of pressure and is due to the moving of the teeth.	After each adjustment, there is a feeling of pressure and the pain of teeth moving. Brackets can cause discomfort and if broken may require urgent attention from your practitioner
Removable	Removable for eating, drinking, sport and music. We recommend that aligner are worn 20-22 hours a day to be most effective	Not removable. Braces are fixed until the end of treatment
